Summary

The British Woodlands 2014 survey aimed to provide focussed insights into perceptions and knowledge of woodland owners and agents around management of ancient woodland (AW) and plantations on ancient woodland sites (PAWS). It was conducted under the auspices of the British Woodlands Survey, a series of regular surveys undertaken to gather evidence about the nation's woodlands and those who manage them.

The bilingual (Welsh and English) survey ran online from September to December 2014; a total of 601 responses were received. The total woodland holding for all respondents was 162,614 ha, including 29,300 ha of AW and PAWS (5.5% of total UK AW and PAWS). Responses were received from across the UK, and there was a good geographical spread – although proportionally fewer responses in NI and Scotland than in Wales and England.

Most respondents owned or managed woodland either as part of a non-agricultural holding, *i.e.* a privately owned woodland (45%), or as part of a privately-owned farm or rural estate (36%). Other ownership types included local authorities, agricultural businesses, charities and private trusts. The most commonly cited aims of ownership stated by woodland owners and agents were to protect/improve nature, biodiversity and wildlife habitat, for personal pleasure and to improve landscape.

Most owners and agents felt they were familiar with the definitions of ancient woodland and PAWS, but far fewer felt confident in being able to identify these sites. Only 25% and 21% of owners felt very confident identifying ancient woodland and PAWS respectively, while 44% and 41% respectively of agents felt very confident identifying ancient woodland and PAWS. These are surprisingly low figures, particularly for agents, and suggest an important training need.

Some 72% of woodland owners who responded to questions on historical features were keen to do more to preserve the historic environment in their woodland; 20% of them had carried out a recent assessment of archaeological features, but only 15% had carried out some form of active management to preserve archaeological features. Among agents, fewer than 50% had carried out a recent assessment or undertook any management. This could be a key area for further promotion of ancient woodland and PAWS management.

The majority of respondents were interested in public engagement with their woodland though not usually via public access. Areas of most interest for owners and agents were: allowing the site to be used for biological or historical research; hosting an event for other woodland owners, or; allowing forest schools on site. There appears to be a significant opportunity for using research and monitoring to engage with private woodland owners and their agents.

The most useful topics of advice for woodland owners and agents were reported as:

- Funding support available for management of ancient woodland and PAWS;
- Management options for ancient woodland;
- Characteristics and importance of ancient woodland and PAWS;
- Information on the history and past use of ancient woodland and PAWS.

A key finding for the way in which agencies communicate advice and guidance to woodland owners and agents was that most people want online information for all aspects except information about funding support, where people prefer to receive advice onsite. Analysing owner and agent responses separately revealed some interesting differences in attitude, knowledge and practice. Future work could further investigate these differences and obtain even more clarity about woodlands in private ownership in the UK.

1. Introduction

Woodlands are among the United Kingdom's most precious assets. The vast majority of these, 72% in fact, are not owned or managed by the State, but are in some other form of ownership, and many of them in private hands. We are largely dependent on these private woodland owners for the provision of public benefits. However, their state of knowledge and willingness to tackle issues of critical importance, such as biosecurity, new tree planting, sustainable woodland management, carbon management, or provision of ecosystem services is poorly understood.

Decisions for policy and practice need to be based on evidence so that sound judgements can be made to ensure the sustainability of our trees, woodlands and forests. Such 'evidence-based policy making' is reliant upon a wide range of information, and while some of this can come in different forms from scientific literature, experts and lobbyists, when it comes to understanding the private woodland owners of the UK the most sound method is to ask them directly.

A recent contribution to improving this evidence base was the British Woodlands Survey 2012 (BWS2012), a collaborative initiative between the Sylva Foundation and a number of key organisations with a strong interest in the woodlands of the UK. Among these was the Department of Land Economy, University of Cambridge, which had been surveying private estate owners for many decades¹ and which enabled BWS2012 to track changes in attitudes, management practices and financial outcomes by linking to former surveys. The BWS2012 survey aimed to put a finger on the pulse of woodland owners across the country; their ownership, management and market activity. More than 2,600 woodland owners responded to the extensive online survey, representing over 7% of the woodland area in Britain outside of Forestry Commission ownership². Participants in the survey and the related one-day workshop expressed the view that similar surveys should be repeated every few years to build on the insights gained from BWS2012 and to maintain a network of interested woodland owners who could connect with policy.

A key proposal of the British Woodlands Survey series is to repeat the full survey, with suitable modifications, every five years interspersed with smaller surveys focussing on particular questions. One such focussed topic emerged in 2014 as a priority for the Woodland Trust, which was seeking insight from woodland owners to help guide effective delivery of its ancient woodland (AW) restoration work. Restoration work is undertaken by the Trust around the UK, generally in discrete project areas with specific regional support available - including a £3 million Heritage Lottery Fund supported project in 10 areas of the UK; PAWS –restoring the UK's woodland heritage, which runs from 2013 - 2018.

Insight from woodland owners, and particularly those owners with ancient woodland or plantations on ancient woodland sites (PAWS), is invaluable for the following reasons:

- understanding current management practices;
- identifying barriers to management;
- developing effective communication channels, and;
- devising appropriate advice to owners.

The Woodland Trust and the Sylva Foundation collaborated to design a new survey – British Woodlands Survey 2014 (BWS2014) - and invited directly participation from owners and managers who had responded to BWS2012, and targeted new participants through outreach and publicity.

This report summarises the results of BWS2014, including selected comparisons with relevant questions in BWS2012.

2. Methodology

People were invited to participate in a structured online survey, built in LimeSurvey, an open-source survey tool (www.limesurvey.org) by:

- 1. Direct mailing using a list of email addresses of people who had participated in BWS2012 and who had expressed willingness to be involved in subsequent surveys;
- 2. An open invitation published in news services (electronic and other) of the Sylva Foundation and the Woodland Trust.
- 3. An invitation to existing Woodland Trust contacts and agents and land owners working on AW and PAWS.

The survey, provided in English and Welsh, comprised 41 questions in six sections using a range of questions presented as variables that could be selected by participants through the use of multiple choice options or three-or five-point Likert scales³ (a psychometric scale commonly used in questionnaires in which respondents express their strength of agreement with each of several statements) that assessed the extent of agreement/disagreement with statements. A small number of 'free-text' questions invited participants to provide more detailed responses. Most questions were optional; mandatory questions were used only to route participants through relevant questions that were not applicable to everyone. The survey ran online from September to December, 2014. The complete set of questions is shown in Appendix 1.

3. Results

The total number of respondents to the British Woodlands Survey 2014 was 601.

3.1. Ownership, size and distribution of woodland properties

Figure 1 shows the distribution of woodland owners and agents who responded to the survey: 59% (355 people) who provided ownership information categorised themselves as 'owners'; 15% (91) were acting on behalf of owners (categorised in this report as 'agents'), and 26% (154) provided no ownership information. The corresponding figures for BWS2012 were similar: 61, 17 and 23%, respectively.

Figure 1 Ownership status of respondents (total number of respondents = 601)

Much of the current report differentiates between Owner and Agent results. (This analysis was not reported for all questions in BWS2012 and combined data are reported where comparisons between the two years are made). Table 1 shows very similar patterns of ownership for BWS2014 and (aggregated) BWS2012 and, not surprisingly, a dominance of privately-owned woodlands among owners and a wider range of ownership types for agents.

Table 1 Ownership/freehold type (agents responded on behalf of owners for whom they were acting). Data are expressed as percentage of respondents.

Ownership/freehold type	Agents	Owners	All	All
	BWS2014	BWS2014	BWS2014	BWS2012
Personal non-agricultural (i.e. a privately-owned woodland)	13	52	45	45
Personal agricultural (i.e. part of a privately-owned farm or rural estate)	31	37	36	34
Public body - Local Authority	16	1	4	4
Business - agricultural (i.e. part of a farm or rural estate run as a Private Limited Company)	6	3	3	6
Charity	13	1	3	3
Private Trust	8	2	3	4
Other	3	2	2	2
Business - forestry or timber (i.e. woodland owned by a Private Limited Forestry Company)	1	2	2	1
Public body – Other	6	0	1	1
Community Ownership	2	1	1	1
Total number of respondents	89	353	442	1861

In total, 259 respondents reported that they owned or managed PAWS, ancient woodlands or both (Figure 2), accounting for 29,300 ha of woodland (Figure 3). This represents about 5.5% of the total known area of ancient woodland, estimated to be about 535,000 ha in Britain (excluding Northern Ireland) by Spencer and Kirby (1992)⁴.

The area of woodland owned or managed by owners themselves or on behalf of others (in ha) is shown in Figure 3. The total amount of woodland represented in the survey was 162,614 ha. This represents about 5% of the total forested area in the UK, estimated in 2015 to be 3,144,000 ha.⁵ Mean (and median) woodland size was 35ha (6.9ha) for owners and 2,010ha (72ha) for agents. As expected, there was an almost-bimodal pattern of size of woodland amongst respondents, with most woodlands either over 100ha or under 30ha: 27 owners and 12 agents had woodlands of 100ha or more, and, respectively, 264 and 9 had woodlands of 30ha or smaller.

Figure 2 Percentage of respondents owning or managing ancient woodland or PAWS

Figure 3 Area of woodland owned and/or managed by respondents (for themselves or others), and area of PAWS and ancient woodland owned or managed by respondents (expressed in thousand ha).

Table 2 shows the total area (in ha) of woodland owned or managed by respondents (combined figures for owners and agents) for themselves and others by ownership type. Only two categories are represented in sufficient numbers to justify any meaningful comparisons - *Personal non-agricultural and agricultural* – but in contrast with BWS2012, where the survey addressed issues concerning business decision-making, for which comparisons between landowners with farms and those without were of interest, BWS2014 had no such focus. Ownership categories are therefore aggregated in the remainder of this report.

Table 2 Area of woodland owned or managed by respondents (combined figures for owners and agents) for themselves and on behalf of others, by ownership type. Area in ha; figures reported in acres have been converted.

Ownership/freehold type	self-owned or managed (ha)	managed for others (ha)
Public body – Other	0	85,036
Personal agricultural (i.e. part of a privately-owned farm or rural estate)	5,904	24,501
Personal non-agricultural (i.e. a privately-owned woodland)	3,263	22,346
Charity	790	3,806
Business - agricultural (i.e. part of a farm or rural estate run as a Private Limited Company)	918	3,528
Private Trust	1,585	2,281
Public body - Local Authority	3,768	1,457
Other	1,922	83
Business - forestry or timber (i.e. woodland owned by a Private Limited Forestry Company)	270	23
Community Ownership	1,119	2
No response	14	0
total	19,551	143,063

The size distribution of ancient woodlands and PAWS reported in the survey (agents and owners data combined) is shown in Figure 4. The size classes follow Spencer and Kirby (1992).

Figure 4 Size class of ancient woodland and PAWS reported by respondents

The location of respondents is shown in Figure 5 and shows again (as for BWS2012) high representation of owners and agents in southern England, which correlates well with the high concentration of AW and PAWS sites.

There is a reasonably good spread across all regions and nations, except Northern Ireland. The most likely explanation for the distribution of responses is the methods used in promoting the survey to networks of known contacts. A publicity campaign was initiated to attract responses to the survey in Scotland towards the end of the survey period and this did result in increased participation there.

Figure 5 Distribution of respondents to BWS2014 and of Ancient Woodland sites in the UK

3.2. Aims of ownership

The question on aims of ownership was amended slightly from the version in BWS2012 to allow finer analysis of responses. Rather than a multiple choice of any of 12 options, BWS2014 asked respondents to grade 12 aims from 0=Unimportant to 10=Very important. The 12 aims were modified from BWS2012 as a result of feedback received. Figure 6 shows that by combining owners and agents' responses, protecting or improving the natural habitat scored highest of the 12 aims; personal pleasure (which was highest scoring among owners and also the most frequently-selected in BWS2012) was second, followed in equal third by landscape improvement and growing wood products. Feedback from BWS2012 had suggested adding bioenergy and wood fuel to the BWS2012 category 'timber production'. Interestingly, this did not affect its overall ranking, though combining 'biodiversity' and 'other environmental benefits' from BWS2012 almost certainly resulted in this modified category achieving the highest score in BWS2014.

Figure 6 Aims for owning woodland, expressed as cumulative scores (red for owners, blue for agents). Multiple aims could be selected. The % for ALL scores is shown at the end of the bars (total exceeds 100% owing to rounding-up.

3.3. PAWS and ancient woodland - knowledge and management

The survey provided two commonly-used definitions for PAWS and ancient woodland and asked respondents to score (scale 1-5) their familiarity with the definitions and, in a separate question, their confidence in identifying these types of woodland. The question was not limited to owners and managers of ancient woodland or PAWS; it aimed at providing a snap shot of current knowledge.

Ancient woodland: "Ancient woodland can be defined as an area continuously wooded since at least 1600 AD" (1750 in Scotland)"

PAWS: "Plantations on ancient woodland sites (PAWS) can be defined as ancient woodland areas which have been planted with either conifers or broadleaves, generally non-native species"

Figure 7 Scores for owners and agents from 1 'Low' to 5 'High' for familiarity with definitions of Ancient woodland (top) and PAWS (below) and confidence in identifying these types of woodland.

Figure 7 shows, as expected, that agents were largely familiar with definitions of ancient woodland and PAWS and confident about identifying them. Owners, though largely familiar with the definitions, were somewhat less confident about identifying these types of woodland.

The majority of owners reported that they do not manage their PAWS and ancient woodlands differently from their other woodland areas, but for agents the reverse was true (Table 3). Almost one third of owners who reported having (or managing) ancient woodland or PAWS provided no management information; interpretation of this data is therefore somewhat constrained.

Table 3 Management of PAWS and ancient woodland ('no response' data are respondents who reported owning or managing PAWS/AW but did not respond to this particular question).

Question: Do you manage your PAWS/AW woodlands differently from other woodlands?	Agents %	Owners %
No	26	50
Yes	53	19
No response	21	32
n	68	221

The management activities undertaken by those owning ancient woodland or PAWS are shown in Table 4, with comparative data for owner and managers who reported that they do not manage their woodlands differently. Only 28% of owners reported that they manage PAWS or ancient woodland differently from their other woodland, whereas 67% of Agents manage these woodlands differently.

Table 4 Management activities in woodlands. Figures are percentages of respondents (multiple silvicultural options could be selected)

	Agents			Owners		
	PAWS/AW		managed	PAWS/AW		managed
	managed	d	same as	managed		same as

reasons						
No management activity	0	5	0	2	5	8

Interestingly, continuous cover was used by both Owners and Agents to a greater extent in ancient woodland and PAWS than other woodland.

Respondents were asked to rate the importance of a number of management activities for PAWS. All activities, with the exception of 'Removing non-native trees', were generally rated important (median score >6) or very important (median score >8) by both Agents and Owners (Fig.8).

Figure 8 Importance of management activities for PAWS (total, and median, scores achieved by each activity from Owners and Agents)

Respondents were asked to rate their familiarity with PAWS restoration activities – those that focus on managing light levels within the wood, and conserving ancient woodland features. There was, as expected, greater familiarity amongst agents compared with owners, but still pockets of uncertainty and a bi-modal pattern of responses amongst owners (Fig. 9), that indicates a need for improved information or knowledge–sharing about PAWS restoration work.

Figures 10 and 11 also indicate where improved knowledge might be helpful for owners, in particular, but also for some agents. Respondents were asked what might further support woodland management or encourage PAWS restoration (Fig. 10), and, conversely, what constrains them (Fig. 11). Not surprisingly, cost was most frequently selected as a constraint, and funding support most desired, but other issues featured strongly and could be supported by targeted activities and additional information.

Figure 9 Percentage of respondents who scored themselves from 0 (low) to 10 (high) in terms of familiarity with PAWS restoration activities. n=262 (Owners); 72 (Agents)

Figure 10 Percentage of respondents selecting up to three aspects that would support woodland management and/or PAWS restoration. n=318 (Owners); 83 (Agents)

Figure 11 Percentage of respondents selecting up to three constraints on woodland management (or further management) n=318 (Owners); 83 (Agents)

In addition to information about management activities, respondents were asked to report what information they had relating to their woodlands. This had been used to assess forest 'management' in a broad sense in BWS2012 and was felt to be a useful indicator of woodlands that are not completely neglected or unmanaged, irrespective of whether they have a management plan or not. Figure 12 shows the responses for BWS2014.

Figure 12 Percentage of respondents reporting having various types of information about the woodlands they own/manage.

3.4. Historical features in landowners' woodlands

The survey included a repetition of questions posed in BWS2012 relating to archaeological and historical features in woodlands. Figure 8 shows the number of respondents who answered "Yes" to a series of four questions.

Figure 13 Percentage of respondents answering "Yes" to questions about historical and archaeological features in their woodlands (n=285 (Owners), 71 (Agents) *note lower number of respondents for first sub-question: n=165 (Owners), 46 (Agents))

Pooling the results of owners and agents, and comparing these with data from the BWS2012 survey, shows a significantly larger percentage of respondents in 2014 who are interested in doing more to preserve the historic environment in their woodlands compared with the number in 2012 (73% vs.40% Figure 9). This is perhaps unsurprising in a survey that focussed on people with a particular interest in ancient woodlands and PAWS, and is an encouraging finding, providing strong evidence that there is interest in this somewhat neglected area of woodland management.

Factors that prevent respondents carrying out work to preserve the historic environment in their woodlands were questioned. The results were similar to those cited in 2012 – lack of time, expense and lack of information were most frequently cited; however it is important to note that the number of responses to this question was low (46 Owners and 11 Agents).

3.5. Sources of information and future engagement

There was a high level of interest in supporting future activities in owners' woodlands (the survey made clear that there was no obligation to organise these events), with biological and historical research (which could include citizen science), events for other woodland owners, and forest schools attracting most interest (Figure 10). A minority of respondents had no interest in future activities

Figure 14 Percentage of respondents expressing interest in engagement activities

Table 5 shows the results of a series of questions asking respondents what kinds of advice they would find useful and how that advice would be best delivered. Funding support was unsurprisingly the most-frequently selected issue, and also management and identification advice, which could help shape future engagement and knowledge transfer events. Most respondents reported that they would prefer online advice for most topics, other than funding support where an advisor onsite was the preferred channel for communication. An interesting difference between Owners and Agents was their assessment of the usefulness of public engagement (Access to information on engaging the public with the woodland; Access to information on making the public aware of works taking place on site through effective interpretation). These were both rated much higher by Agents than Owners.

Table 5 Types of information about ancient woodland and restoration of PAWS considered useful and preferred media for receiving the information. (Percentage of respondents – Agents shown in blue; Owners in red)

Conclusions

The BWS2015 survey was part of a broader outreach programme to support landowners in the management of ASNW and PAWS and to encourage restoration of ancient woodland using best practice woodland management. In order to derive pragmatic guidance for landowners, baseline data was needed at the outset of the project to better understand current attitudes and motivations, which could be revisited later to identify impacts of work undertaken by the Woodland Trust around the UK.

The survey reached a large number of woodland owners and managers, who between them represented just over 5% of area of ancient woodland in Britain. It collated a useful set of baseline data, which can be used to help inform guidance and policy development, against which future changes can be measured.

Respondents were very similar in type and size of woodland holdings to those surveyed in the larger 2012 British Woodlands Survey, which did not focus on ancient woodland, but aimed to take a snap shot in time of attitudes, practices and aspirations of private woodland owners. Responses were very similar across the two surveys, despite the fact that only a quarter of respondents could be positively identified as having completed both surveys, which indicates that the present study was representative of the wider woodland-owning community who do engage with knowledge-generating studies. Assessing the views and practices of the 'hard-to-reach' is an acknowledged problem, but it would be unhelpful, and perhaps perverse, to assume that their views are markedly different from those of contributors.

The present survey indicated good awareness of ancient woodland and PAWS and interest in restoration, and, in addition to the predicted constraints of time and money, a need for more practical information and guidance.

Ancient woodland and plantations on ancient woodland sites (PAWS) - management and restoration

Welcome to the BWS2014 - Ancient woodland, PAWS and restoration survey.

Ancient woodland provides one of the richest ecological habitats in the UK, and is intricately linked to our culture and history. Now covering just 2% of the UK, ancient woodland is a fragmented and often damaged habitat. Through restoring and enhancing areas of ancient woodland and plantations on ancient woodland sites (PAWS) it is possible to preserve the great variety of flora and fauna and protect important historical and archaeological remnants while ensuring the woodland meets owners' objectives.

Now through an exciting Heritage Lottery Fund project, owners and managers of ancient woodland and PAWS can access expert advice and site assessments free of charge in many areas of the UK.

The aim of the current survey is to gather information to help inform the HLF project and future work using responses using responses from a wide cross-section of woodland owners and managers. We very much hope that you will take the survey.

Information is provided at the end of the survey on how to identify ancient woodland and PAWS, and contact details for the local Project Officers providing expert advice to owners and managers should you wish to enquire about a visit.

Your participation in this survey is much appreciated. Thank you in advance for taking the time to complete the survey, which we estimate will take between 20 and 30 minutes. The survey will be live throughout September 2014.

There are 41 questions in this survey

Woodland owners & managers - About You

1 [A1]
Please enter your email here to take the survey.
This is not mandatory, but it will ensure that you are sent a link to the online report.
Please write your answer here:
The data will be kept securely on the server by the Sylva Foundation (a Charity registered in England and Wales 1128516 and in Scotland SC041892)

2 [A2]Which of the following most accurately reflects your position?
Please choose only one of the following:
O I own or lease woodland (a single plot or multiple woodlands)
O I am acting on behalf of an owner of woodland (a single plot or multiple woodlands)
We are using a broad definition of 'woodland' for the survey in order to capture the widest possible set of responses from people have what THEY consider to be woodland on their land. The Forestry Commission definition of woodland, used in national statistics, can be found here .
3 [A3]Are you acting on behalf of a single owner?
Only answer this question if the following conditions are met: Answer was 'I am acting on behalf of an owner of woodland (a single plot or multiple woodlands)' at question '2 [A2]' (Which of the following most accurately reflects your position?)
Please choose only one of the following:
O Yes
O No

4 [A3Y]We recognise that you may be managing many woodlands of very different types and that it may be difficult or impossible to respond to some of the following questions in a generic way. The feedback received from BWS2012 made it clear that it is impractical and time-consuming to take this survey more than once; we therefore invite managers of multiple woods to choose a 'typical' PAWS site or a site containing some PAWS and continue the survey for that woodland.

Only answer this question if the following conditions are met:

Answer was 'I am acting on behalf of an owner of woodland (a single plot or multiple woodlands)' at question '2 [A2]' (Which of the following most accurately reflects your position?) and Answer was 'No' at question '3 [A3]' (Are you acting on behalf of a single owner?)

rlva Surveys - British Woodlands Survey 20
--

5 [A4]
What best defines the owner/freeholder of the land?
Please choose only one of the following:
Personal agricultural (i.e. part of a privately-owned farm or rural estate) Personal non-agricultural (i.e. a privately-owned woodland) Private Trust Business - agricultural (i.e. part of a farm or rural estate run as a Private Limited Company) Business - forestry or timber (i.e. woodland owned by a Private Limited Forestry Company) Public company Public body - Local Authority Public body - Other Charity Community Ownership Other
6 [A5] We would like to ask you some questions related to the size of your woodlands. Please select hectares or acres as your preferred unit
Please choose only one of the following:
O hectares (ha) O acres
7 [A6A]What is the total area of woodland you own or manage?
Only answer this question if the following conditions are met: Answer was 'acres' at question '6 [A5]' (We would like to ask you some questions related to the size of your woodlands. Please select hectares or acres as your preferred unit)
Please write your answer(s) here:
Total area of woodland I own Total area of woodland I manage on behalf of other owners

Understanding PAWS & Ancient woodland

11 [B2a]Ancient woodland can be defined as an area continuously wooded since at least 1600AD (1750 in Scotland).

12 [B1]
How familiar are you with that definition of ancient woodland?
Please choose only one of the following:
O 1
O 2
O 3
O 4
O 5
From not familiar (point 1) to familiar(point 5)
13 [B2]
How confident are you that you can identify/recognise characteristics of ancient woodland?
Please choose only one of the following:
O 1
O 2
O 3
O 4
O 5
From not confident at all (point 1) to very confident (point 5)

14 [B3]Plantations on ancient woodland sites (PAWS) can be defined as ancient woodland areas which have been planted with either conifers or broadleaves, generally non-native species.

lva Surveys - British Woodlands Survey 20

15 [B3a]
How familiar are you with that definition of PAWS?
Please choose only one of the following:
O 1
O 2
O 3
O 4
O 5
From not familiar (point 1) to familiar (point 5)
16 [B3b]
How confident are you that you can identify/recognise characteristics of PAWS?
Please choose only one of the following:
O 1
O 2
O 3
O 4
O 5

Managing woodland

17 [C1]			
In which region of the UK is your woodland?			
If possible, please move the pointer to the centre of your PAWS, or if have PAWS, then to the centre of your woodland (or one of your woodland)	-		you
Please write your answer here:			
10 [07]			
18 [C7] Do you have any of the following types of information on your woodl	ands?		
Please choose the appropriate response for each item:			
	Yes	Uncertain	No
A map of the woodland showing compartments and/or sub-compartments	0	0	0
A history of management operations (planting, thinning, felling) carried out in the woodland over the last 20 years	0	0	0
Inventory information detailing the tree species growing in the woodland	0	0	0
Inventory information detailing measurements of the trees growing in the woodland	\circ	0	0
A long-term vision for the woodland detailed in a management plan	0	0	0
A UKWAS-compliant management plan	0	0	0
A veteran-tree management plan	0	0	O
I am not sure what information there is on my woodlands	0	0	0
19 [C2]Do you own or manage ancient woodland or any Plantation o Sites (PAWS)?	n Anci	ent Woodla	ınd
Please choose only one of the following:			
O Yes- ancient woodland			
O Yes - PAWS			
O Yes- both ancient woodland and PAWS			
O No			
O Not sure			

7 of 18

20 [C3a]How many acres of PAWS and ancient woodland?
Only answer this question if the following conditions are met: Answer was 'acres' at question '6 [A5]' (We would like to ask you some questions related to the size of your woodlands. Please select hectares or acres as your preferred unit)
Please write your answer(s) here:
PAWS ancient woodland
21 [C3h]How many hectares of PAWS and ancient woodland? Only answer this question if the following conditions are met: Answer was 'hectares (ha)' at question '6 [A5]' (We would like to ask you some questions related to the size of your woodlands. Please select hectares or acres as your preferred unit) Please write your answer(s) here: PAWS ancient woodland
22 [C4]Do you manage your PAWS and ancient woodland areas in a different way from the rest of your woodland? Please choose only one of the following: Yes No

Coetir hynafol a phlanhigfeydd ar safleoedd coetir hynafol (PAWS) - rheoli ac adfer

Croeso i arolwg BW14 - Coetir hynafol, PAWS ac adfer.

Mae coetir hynafol yn darparu un o'r cynefinoedd ecolegol cyfoethocaf yn y Deyrnas Unedig, ac mae iddo gyswllt cymhleth â'n diwylliant a'n hanes. Yn ymestyn dros ddim ond 2% o'r Deyrnas Unedig erbyn hyn, mae coetir hynafol yn gynefin tameidiog, sydd wedi dioddef difrod yn aml. Trwy adfer a gwella ardaloedd o goetir hynafol a phlanhigfeydd ar safleoedd coetir hynafol (PAWS) mae hi'n bosibl cadw amrywiaeth fawr o blanhigion ac anifeiliaid yn ddiogel a gwarchod gweddillion hanesyddol ac archeolegol pwysig yr un pryd â sicrhau bod y coetir yn cwrdd ag amcanion y perchennog.

Yn awr, trwy brosiect Cronfa Dreftadaeth y Loteri cyffrous, gall perchnogion a rheolwyr coetir hynafol a PAWS gael at gyngor arbenigol ac asesiadau safle yn rhad ac am ddim mewn llawer rhan o'r Deyrnas Unedig.

Nod yr arolwg presennol yw dylanwadu ar y prosiect hwn a gwaith yn y dyfodol gan ddefnyddio ymatebion o groestoriad mor eang ag sy'n bosibl o berchnogion a rheolwyr coetir. Rydym yn gobeithio'n fawr iawn y byddwch yn gwneud yr arolwg.

Mae gwybodaeth wedi'i darparu ar ddiwedd yr arolwg am sut i glustnodi coetir hynafol a PAWS, a manylion cysylltu â'r Swyddogion Prosiect lleol sy'n darparu cyngor arbenigol i berchnogion a rheolwyr petaech yn dymuno ymholi ynghylch ymweliad.

Gwerthfawrogir eich cyfranogiad yn yr arolwg hwn yn fawr. Diolch ichi o flaen llaw am gymryd yr amser i gwblhau'r arolwg, y tybiwn y bydd yn cymryd rhwng 20 a 30 munud. Bydd yr arolwg yn fyw trwy gydol mis Medi 2014.

Mae 41 o gwestiynau yn yr arolwg hwn

Perchnogion a rheolwyr coetir - Ynglŷn â Chi

1 [A1]				
Rhowch eich e-bost i mewn yma i wneud yr arolwg os gwelwch yn dda.				
Nid yw hyn yn orfodol, ond bydd yn sicrhau y caiff cyswllt i'r adroddiad ar-lein ei anfon atoch.				
Ysgrifennwch eich ateb yma:				
Bydd y data'n cael ei gadw'n ddiogel ar y gweinydd gan Sefydliad Sylva (Elusen wedi'i chofrestru yng Nghymru a Lloegr 1128516 ac yn yr Alban SC041892)				

2 [A2]Pa un o'r canlynol sy'n adlewyrchu eich sefyllfa yn fwyaf cywir?
Dewiswch ddim ond un o'r canlynol:
Rwyf yn berchen neu'n cymryd coetir ar brydles (llain unigol neu goetiroedd lluosog)
Rwyf yn gweithredu ar ran perchennog coetir (llain unigol neu goetiroedd lluosog)
Rydym yn defnyddio diffiniad eang o 'goetir' ar gyfer yr arolwg er mwyn dal y set ehangaf posibl o ymatebion gan bobl sydd â'r hyn y maen NHW'N ystyried ei fod yn goetir ar eu tir. Mae diffiniad y Comisiwn Coedwigaeth o goetir, a ddefnyddir mewn ystadegau cenedlaethol, i'w gael <u>yma</u> .
3 [A3]A ydych yn gweithredu ar ran perchennog unigol?
3 [A3]A ydych yn gweithredu ar ran perchennog unigol? Ateb y cwestiwn hwn ddim ond os yw'r amodau canlynol wedi'u bodloni: Yr ateb oedd 'Rwyf yn gweithredu ar ran perchennog coetir (llain unigol neu goetiroedd lluosog) ' yng nghwestiwn '2 [A2]' (Pa un o'r canlynol sy'n adlewyrchu eich sefyllfa yn fwyaf cywir?)
Ateb y cwestiwn hwn ddim ond os yw'r amodau canlynol wedi'u bodloni: Yr ateb oedd 'Rwyf yn gweithredu ar ran perchennog coetir (llain unigol neu goetiroedd lluosog) ' yng nghwestiwn '2 [A2]' (Pa un o'r
Ateb y cwestiwn hwn ddim ond os yw'r amodau canlynol wedi'u bodloni: Yr ateb oedd 'Rwyf yn gweithredu ar ran perchennog coetir (llain unigol neu goetiroedd lluosog) ' yng nghwestiwn '2 [A2]' (Pa un o'r canlynol sy'n adlewyrchu eich sefyllfa yn fwyaf cywir?)
Ateb y cwestiwn hwn ddim ond os yw'r amodau canlynol wedi'u bodloni: Yr ateb oedd 'Rwyf yn gweithredu ar ran perchennog coetir (llain unigol neu goetiroedd lluosog) ' yng nghwestiwn '2 [A2]' (Pa un o'r canlynol sy'n adlewyrchu eich sefyllfa yn fwyaf cywir?) Dewiswch ddim ond un o'r canlynol:

4 [A3Y]Rydym yn cydnabod y gallech fod yn rheoli llawer o goetiroedd o fathau gwahanol iawn ac y gall fod yn anodd neu'n amhosibl ymateb i rai o'r cwestiynau canlynol mewn modd cyffredinol. Fe wnaeth yr adborth a dderbyniwyd o BW12 hi'n eglur ei bod yn anymarferol ac yn cymryd amser gwneud yr arolwg hwn fwy nag unwaith; felly rydym yn gwahodd rheolwyr coedwigoedd lluosog i ddewis safle PAWS 'nodweddiadol' neu safle sy'n cynnwys rhywfaint o PAWS a pharhau'r arolwg ar gyfer y coetir hwnnw.

Ateb y cwestiwn hwn ddim ond os yw'r amodau canlynol wedi'u bodloni:

Yr ateb oedd 'Rwyf yn gweithredu ar ran perchennog coetir (llain unigol neu goetiroedd lluosog) ' yng nghwestiwn '2 [A2]' (Pa un o'r canlynol sy'n adlewyrchu eich sefyllfa yn fwyaf cywir?) a Yr ateb oedd 'Na' yng nghwestiwn '3 [A3]' (A ydych yn gweithredu ar ran perchennog unigol?)
